

1. Project Title

Financial Sales Dashboard using Power BI

2. Objective

The objective of this project is to analyze a financial sales dataset, clean the data using Python, and create an interactive Power BI dashboard that helps stakeholders understand business performance through visualizations. The dashboard provides insights into sales, profit, products, countries, and customer segments.

3. Dataset Description

The dataset contains financial sales information with the following fields:

- Country
- Product
- Segment
- Discount Band
- Units Sold
- Manufacturing Price
- Sale Price
- Gross Sales
- Discounts
- Sales
- COGS
- Profit
- Date
- Month Name
- Month Number
- Year

4. Data Cleaning

The dataset was cleaned in Python using Pandas.

The following operations were performed:

- Imported the Excel dataset.
- Checked missing values.
- Removed duplicate records.
- Removed extra spaces.
- Verified data types.
- Checked for invalid values.
- Saved the cleaned dataset for Power BI analysis.

5. Data Analysis

The cleaned dataset was analyzed to understand business performance.

The following metrics were calculated:

- Total Sales
- Total Profit
- Total Units Sold
- Sales by Product
- Sales by Country
- Sales by Segment
- Monthly Sales Trend

6. Power BI Dashboard

The dashboard includes the following visualizations:

KPI Cards

- Total Sales
- Total Profit
- Total Units Sold

Charts

- Sales by Product (Bar Chart)
- Sales by Country (Column Chart)
- Profit by Product (Bar Chart)
- Sales by Segment (Pie Chart)
- Monthly Sales Trend (Line Chart)

Filters (Slicers)

- Product
- Country
- Segment
- Year

These interactive visuals allow users to explore business performance from different perspectives.

7. Key Findings

- The dashboard provides a clear overview of the company's financial performance.
- Some products contribute significantly more sales than others.
- Sales differ across countries, indicating varying market performance.
- Different business segments contribute different proportions of total sales.
- Monthly sales trends reveal periods of stronger and weaker performance.

- Profit does not always increase at the same rate as sales, highlighting the importance of cost management.

8. Recommendations

- Focus marketing efforts on the best-performing products.
- Increase investment in countries with consistently high sales.
- Improve strategies for products with low profitability.
- Review discount policies to maximize profit.
- Continue monitoring monthly sales trends to support forecasting and inventory planning.

9. Conclusion

This project demonstrates the complete workflow of a data analyst by cleaning the data, analyzing key business metrics, and presenting the results through an interactive Power BI dashboard. The dashboard enables stakeholders to make informed decisions using clear and meaningful visualizations.
